

The Value of Public Bonding

Surety *protects.*

INDUSTRY TOOLKIT

Join our Surety Protects campaign to elevate the value of public-sector bonding, as we inform and educate key state and local officials overseeing public construction projects about the many benefits of surety bonding. More than just protection from costly defaults, surety bonds save money, improve project quality and protect taxpayers.

The content below is based on a new economic analysis of surety bonding conducted by leading global management firm EY. Use these messaging materials to help communicate the value of public bonding.

Surety protects.

Here's the difference a surety bond makes on a
\$35 million highway construction project.

THE VALUE OF SURETY BONDS

Protecting taxpayers and local businesses as we build for the future

Highways are the backbone of our economy, both locally and nationwide. Surety helps our investments in construction and improvements produce top-quality roadways.

All data based on analysis prepared by EY.

SFAA THE SURETY & FIDELITY ASSOCIATION OF AMERICA

SAVES TAXPAYER MONEY

Delivers **\$140,000** in taxpayer savings, even if a default never occurs.

PROTECTS TAXPAYER INVESTMENT

Prevents **\$8 million** in potential taxpayer loss if a contractor defaults — and the surety company steps in to help finish the job.

All data in this document based on a report prepared by EY, The Economic Value of Surety Bonds, November 2022

GETS THE JOB DONE RIGHT

Appropriate vetting

ensures government agencies hire reliable, financially stable contractors who can complete the job.

SUPPORTS LOCAL BUSINESSES

Local subcontractors, suppliers and workers **all get paid** even if the general contractor defaults.

SAVES TIME

Bonded projects are **5x more likely** to finish on time or ahead of schedule compared to non-bonded projects.

EY

THE VALUE OF SURETY BONDS

Protecting taxpayers and local businesses as we build for the future

The quality of our water systems affects all of us. Maintaining the safety and cleanliness of our water is one of the fundamental duties of civil society, and surety helps waterworks construction projects maintain community health and quality of life.

All data based on analysis prepared by EY.

SFAA THE SURETY & FIDELITY ASSOCIATION OF AMERICA

SAVES TIME

Bonded projects are **5x more likely** to finish on time or ahead of schedule compared to non-bonded projects.

EY

SAVES TIME

Bonded projects are **5x more likely** to finish on time or ahead of schedule compared to non-bonded projects.

Surety protects.

Surety Bonds protect taxpayers & get the job done right

Public construction projects like highways and transportation infrastructure, water projects and schools deploy taxpayer dollars to advance the public good – so ensuring project success is a vital responsibility for government agencies.

The benefits of surety bonds extend well beyond protection from default – reducing taxpayer costs, putting well-qualified contractors on the job, supporting local small businesses, and saving project time.

Surety bonds ensure qualified contractors are on the job.

- Surety companies lead a rigorous prequalification process that includes in-depth analysis of a contractor's finances, billing patterns, jobs-in process, timeliness, of completion and more.
- Greater experience delivers greater efficiency: by vetting and prequalifying contractors, sureties save public construction leaders time.
- Unbonded construction projects are more likely to default than bonded projects – perhaps by 10 times.

Surety bonds protect taxpayers.

- Using a surety bond on a typical \$35 million construction project protects taxpayers from an \$8 million loss in the event of contractor default.
- Should financial difficulties arise, a general contractor is five times more likely to prioritize finishing bonded projects than non-bonded ones.
- If a contractor defaults, surety companies intervene, saving public construction leaders time and headaches – and saving taxpayers additional costs.

Surety bonds protect small businesses and local workers.

- When a contractor defaults on an unbonded construction project, the cost of completion is 85% higher than on projects protected by surety bonds.

Surety bonds pay for themselves, saving taxpayers money.

- Analysis by global consulting firm EY finds portfolios of bonded construction projects outperform unbonded project portfolios.
- Even for projects that don't end up defaulting, the cost savings for a bonded portfolio of projects cover the cost of the bonds themselves.
- Three in four developers surveyed by EY reported surety bonding reduces contractor pricing due to greater project certainty provided by surety bonding.
- When bonds are used on a typical \$35 million construction project, surety bonds deliver \$141,000 in taxpayer savings even if a default never occurs.

Surety bonds get the job done.

- Surety bonds guarantee contractual obligations are met and projects are delivered.
- But when completion of a bonded project is threatened, the surety company intervenes to give a contractor technical expertise, extend financial support, and quickly get the project back on track.
- If a contractor defaults, the surety will hire a qualified replacement contractor or even handle rebidding the contract.

What's a surety bond?

A surety bond for a public construction project is a three-party written agreement under which the surety company guarantees a government agency that the principal (typically a general contractor) will execute work according to contract terms. The surety bond protects the government agency by guaranteeing performance if the contractor does not fulfill its obligation.

All data in this document based on analysis prepared by EY. Survey results based on EY-SFAA Value of Surety Survey (September 2021). The survey contained responses from 100 owners and developers of construction projects in the public and private sectors. Costs are estimated based on the EY-SFAA survey. Dollar amounts are calculated as the anticipated hours of work saved times the average hourly wage paid to construction managers (occupation 11-9021). Public construction leaders are employees that plan, direct, or coordinate activities concerned with the construction and maintenance of structures, facilities, and systems; construction leaders participate in the conceptual development of a construction project and oversee its organization, scheduling, budgeting, and implementation. Data are from U.S. Bureau of Labor Statistics' National Occupational Employment and Wage Estimate. Default costs are based on data from SFAA loss severity study, provided to EY in May 2021 by SFAA. Loss is spread over the cost of the project and in present value.

KEY MESSAGING

for Policymakers

The following messages define the value surety delivers for taxpayers, local small businesses, government budgets, and the broad public interest.

Use these in your meetings with elected officials, policymakers, and their staff. Send the message that by using surety, they are doing right by their constituents: protecting small business owners, local workers, and taxpayer investments.

They are also ensuring public building projects are done efficiently and well to benefit current and future generations.

[Download Key Messaging documents here.](#)

KEY MESSAGING

for Construction Leaders

The following messages define the value surety delivers for government agencies leading public construction projects.

Help deliver these messages in your meetings with public project owners, procurement officials, construction managers, and other key government agency leaders.

Underscore that by using surety, government agencies send a clear signal they are exercising responsible project management and serving as good stewards of the public interest.

[Download Key Messaging documents here.](#)

The image shows two overlapping document thumbnails. The top thumbnail is partially obscured by the bottom one. Both documents have an orange header with the text 'Key Messaging for Construction Leaders'. The main title of the documents is 'The Value of Surety Bonds'. The top document features the SFAA logo (The Surety & Fidelity Association of America) and a photograph of three construction professionals. The content of the documents includes:

- Surety bonds provide the most comprehensive risk management available to address construction leaders' top concern: getting the job done.**
- Bonded project portfolios outperform unbonded project portfolios.**
- Surety companies protect government and taxpayers by guaranteeing contractual obligations are met — and step in when they're not.**
- Surety provides financial security to suppliers, subcontractors, and workers — ensuring they get paid even if a general contractor defaults.**
- If a contractor defaults on an unbonded project, the cost of completion is 85% higher and takes nearly twice as long to complete than a bonded project.**
- Should a contractor default, surety companies intervene, saving public construction leaders cost, time, and headaches.**

A quote from EY is featured: *"Three-in-four developers surveyed by EY reported surety bonding reduces contractor pricing."*

Below the quote, it states: **Surety companies ensure general contractors have the capabilities, expertise, and financial strength to complete a project.**

- Surety companies make certain only qualified bidders will compete for your project. Surety companies conduct appropriate analysis of a contractor's finances, billing patterns, jobs in-progress, timeliness of completion, and more.**
- Nearly all (96%) construction experts surveyed agreed prequalification is more likely to occur on bonded projects than on unbonded projects (61%).**
- Greater experience delivers greater efficiency: sureties save project owners time vetting and prequalifying general contractors.**
- Unbonded public construction projects are more likely to default than bonded projects — perhaps by 10 times.**

At the bottom, it says: **All data based on analysis by EY* and provides the website www.surety.org. A small note at the very bottom reads: 'All data in this document based on a report prepared by EY, The Economic Value of Surety Bonds, November 2022'.

PRESENTATION DECK

This slide deck is a powerful way to communicate the EY report findings and our campaign message to a real-time audience. Use it when meeting with policymakers and stakeholders.
